REASONS FOR ALLOWANCE/COMMENTS ON IDS and TITLE

Information Disclosure Statement

1. The information disclosure statement filed 2/10/04 fails to comply with 37 CFR 1.98(b)(5), which requires each cited non-patent literature publication be identified by date. It has been placed in the application file, but the non-patent literature item 5 has not been considered.

Title Change

2. The Title of the Invention has been changed to:
-- Longitudinal Double-Mode SAW Filter Utilizing Electrode Finger Phase Weighting -- (see claim 1, lines 30-31).

Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance:

The prior art of record does not disclose or fairly suggest a longitudinal double-mode SAW filter comprising each of the specifically recited features, and especially having the recited relationship of the "lengths... of periodically arranging parallel conductors of said first and second interdigital transducers" and "periodically arranging the reflectors" (see paragraph 10 of claim 1), and having "electrode finger phase weighting" that generates the "electrode charge distribution function" "on the electrode due to natural modes of oscillation" and "to select a single pair of natural modes..." as recited (see the last paragraph of claim 1).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ichikawa U.S. 6,259,336 discloses surface acoustic wave (SAW) filters having phase reversals to provide phase weighting of the interdigital transducers (see the abstract), wherein the filter can have two transducers (Fig. 14) or more (Fig. 26).

Inoue et al. U.S. 6,570,471 discloses a SAW ladder filter wherein the single interdigital transducer of the SAW resonators has phase reversed electrode fingers to provided phase weighting of the transducers.
